NGUYỄN KHÁNH HOÀNG (Adrian)

PRODUCT OWNER | LEAD BUSINESS ANALYST | AI-ASSISTED DELIVERY

Hanoi, Vietnam | hoangnk5641@gmail.com | linkedin.com/in/hoangnk5641
Portfolio: hoangnk5641.github.io

PROFESSIONAL SUMMARY

Product Owner and **Lead Business Analyst** with **6+ years** of client-facing software delivery (Fintech, E-commerce, Enterprise CRM, Web3) and **4+ years** leading business-analysis teams, **PSPO I** certified. Works AI-first from end to end: He specifies, decides and reviews; GenAI agents (Claude Code) draft the documents, tests and code under his written rules, and he checks their output against the source. With this method he took a multiplayer game from idea to a live public service with real players, and recovered the requirements of four undocumented telemedicine products for a client in one week.

CORE COMPETENCIES

- **Business consulting and analysis:** Requirement elicitation, user flows and journeys, use cases, user stories with Given / When / Then criteria, non-functional requirements, traceability, requirements reverse-engineered from a running system, decision logs
- **Agile delivery:** Scrum, sprint planning, backlog grooming, release planning
- **Bridge and delivery control:** Written briefs for the development team, numbered Q&A with a proposal for each question, scope and change control, risk and dependency management, release gates, UAT
- **AI-Driven Development:** Directing AI agents with written rules and reusable prompt templates (skills), parallel AI work streams, model and cost routing, AI output verification, document generation in Vietnamese or English
- **Data safety:** Masked personal data, no credentials in AI hands, client data kept out of shared material, security reviews with logged findings
- **Leadership:** Team lead of analysts across four divisions, training and mentoring, presale and solution consulting
- **Tools:** Claude Code, GitHub, Figma, Jira
- **Languages:** Vietnamese (native), English (professional, B.A. in English for Science and Technology)

PROFESSIONAL EXPERIENCE

Product Owner / Lead Business Analyst | SotaTek., JSC, Hanoi | Jun 2021 to Present

Leadership and standards

- Leads the business and systems analysis function of about 35 analysts across four delivery divisions; Set unified requirements and documentation standards that reduced scope creep and aligned engineering with stakeholders. Owns recruitment, performance and training for a team from Intern to Lead.
- Provides presale and solution consulting with sales and technical teams: Scoping, delivery planning, and functional design for large, unclear client needs.

National pharmacy-chain client: Requirements for undocumented telemedicine products, AI-driven | Oct 2026 to Present

- Recovered the requirements of four legacy products with no documentation (patient app, doctor app, back office, public site) from the running system, with the test environment as the source of truth; Delivered versioned FR documents, a use case sheet, a WBS and an overview deck within a week.
- Set the client format from his own review of the first demo, then scaled it with AI agents by product area, with named risks and their handling.
- Closed scope gaps: His review of the use-case inventory found missing use cases and raised the open points to the client. After a reviewer found missing exception cases, he traced the cause and made an exception checklist a gate for every use case.
- Kept client data safe with AI in the loop: Personal data masked in screenshots, he signs in himself (the AI never types a password) and confirms every payment step.

Earlier client projects (selected)

- **E-commerce price intelligence (2025, Korean fashion and lifestyle platform):** Owned a three-phase roadmap and the operator platform for competitor price monitoring and automated repricing. Impact: Real-time price response across about 80% of product page views, 95%+ price-analysis accuracy, response under 10 minutes, about 50% less manual monitoring.
- **Crypto sports-betting platform (2021 to 2022):** Sequenced a compliance-gated launch around certification dependencies; Led the SportRadar and iTechLabs integrations that secured the operator certification and the eGaming

licence for international markets.

- **DeFi lending protocol for real-world-asset debt (2023 to 2024):** Owned investor KYC / KYB onboarding and the SumSub integration end to end; Helped the team raise $2M.

Microsoft Dynamics 365 Support Engineer | Tek Experts, Hanoi | Jul 2019 to Jun 2021

- Senior engineer and group leader for Microsoft's global partners and enterprise customers, in English.

AI-DRIVEN PRODUCT EXPERIENCE

Self-hosted multiplayer card game | Sep 2026 to Present

Product Owner / Lead Business Analyst | Personal product, built by AI agents under his specification and review

Business analysis and spec quality

- Specified the product end to end: Flows, user journeys, a screen map, user stories with Given / When / Then criteria, non-functional requirements and a traceability matrix from story to screen to requirement.
- Linked every backlog item to a confirmed product goal, so each piece of work traces to an outcome.
- Resolved every open question as a numbered row with a proposal; Reviewed versioned mockups with users, comments pinned to screen regions.

Risks, scope and dependencies

- Proved capacity with automated load tests on the live server: 300 concurrent simulated players with 0 errors, and full recovery after a forced crash (every player and every match came back). Kept the claim to what passed: A 500-player run failed one server check, so the limit was not raised.
- Ran a production readiness review against the target load, found the blockers around the core (abuse at the door, restart loops, growing data scans) and decided its questions the same day, such as buying capacity only near the measured ceiling.
- Hardened the game for public play: A security audit with the first fixes the next day, safe public access with no open port, and phone health alerts with timed backups.

Bridging the AI development team

- Ran AI work streams in parallel, each with a written brief: Scope, files not to touch where streams overlap, reserved IDs, merge order; Reviewed every change before merge.
- Turned player reports into a live feedback loop: Each report answered at each stage (Acknowledged, Fixed, Deployed); All reports of a group playtest prioritized the next day.
- Shipped through a release gate on a release branch, with tagged deploys and a one-line rollback.

Human in the loop and AI cost

- Checked AI output with evidence, not trust: Tests proven by deliberate one-line breaks; Fixes tested on a month of aged data, which exposed a 10 to 16 second freeze that a fresh test database had hidden.
- Cut AI cost per step by 40% with context limits, and moved checkable chores to the cheapest model.

Prompt templates, playbooks and reusable kits | Oct 2026 to Present

- Wrote the operating rules and had reusable prompt templates (skills) built that every AI work stream follows: Planning, merge, handoff, backlog and review.
- **Functional requirement kit:** Turned his use case and FR method into a kit: One settings file builds the use case sheet and the FR document in Vietnamese or English, every rule has a written reason, every build checks the writing rules, and the exception checklist is a review gate. The pharmacy-chain client project moved to it the day it was made.
- **CBAP exam simulator:** A private study site where every practice question was checked against the BABOK Guide, each with a reference and a verdict.
- **Adrian Tracker:** A site that shows all his AI work streams and what waits for his decision; Its buttons start AI work.

CERTIFICATIONS

- Professional Scrum Product Owner I (PSPO I), Scrum.org; Microsoft Certified: Azure Fundamentals, Azure AI Fundamentals, Dynamics 365 Sales Functional Consultant Associate

EDUCATION

- Hanoi University of Science and Technology: B.A. in English for Science and Technology | 2015 to 2019
- APTECH Computer Education: Software Engineering / Computer Programming | 2015 to 2019

HONORS

- SotaTek Team of the Year 2025, Dream Team 2023 and 2021; Microsoft Customer Hero Champion 2020 and 2021
